Centripetal

CleanINTERNET®
Intelligence-led Cyber Defense

CleanINTERNET is a **managed security service** that provides an important layer of security. By applying threat intelligence to enforce a robust security policy and protect your network from known threats, CleanINTERNET offers continuous protection along with a massive reduction in threat event volume.

Centripetal provides the industry's best threat intelligence network protection, designed as a cost effective outsourced managed service. Our experienced team of security experts will do all the heavy lifting — including implementation, configuration, management, and comprehensive ongoing threat analysis— so you can get you up and running fast.

- **Block and stop suspicious or malicious activity that you don't want or need — both inbound and outbound**

- **Malicious cyber risks are automatically mitigated before they ever reach your network**

- **The service adds a critical layer of 'must-have' protection at the edge of your enterprise network**

- **Always-on, curated, and aggregated advanced cyber threat intelligence feeds from "best-in-class" high fidelity providers**

- **Access to an experienced and talented team of cyber security analyst professionals to help continually optimize the service**

All the benefits of the CleanINTERNET service are realized immediately upon deployment and activation. The comprehensive set of security rules and policies will begin scrubbing your inbound & outbound streams of traffic against billions of Indicators of Compromise (IOC).
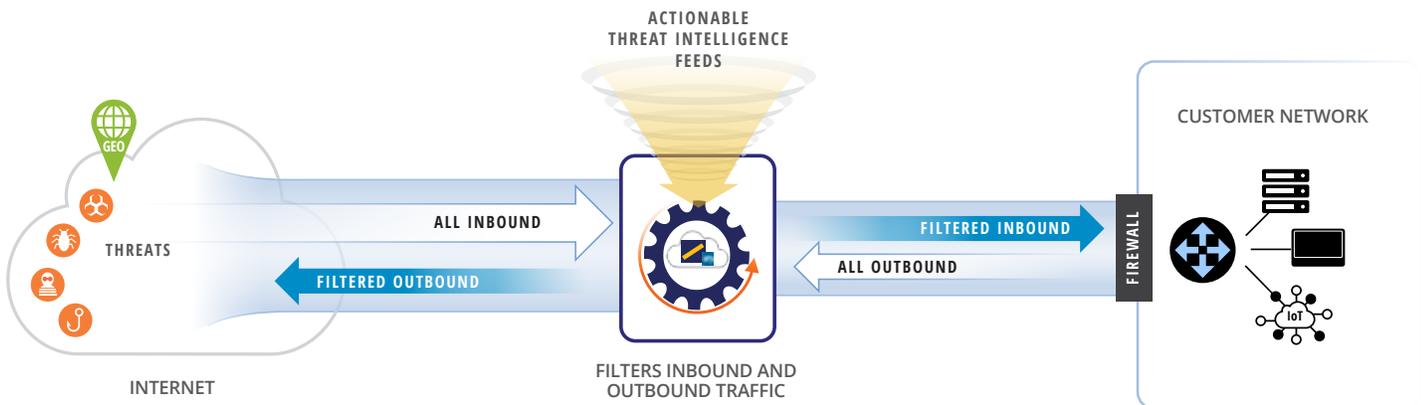

FEATURES & BENEFITS

- NSaaS — Network Security as a Service model

- Proactive and continuous network shielding (block)

- Massive reduction of noise and false positives

- Real-time cyber threat intelligence feed updates

- Integrated Packet Capture analysis capability (PCAP)

- Monitoring and visibility cloud-based dashboards

- Rapid TTV — operational within 1 day

- Turnkey deployment by our expert support team

- Operational expenditure financial cost model

- Reduce business risk by enhancing security posture

Centripetal protects your organization from advanced threats by operationalizing intelligence.

CentripetalNetworks.com

Our goal is to continually make your environment more secure and develop risk models to flush out new threats and anomalies. We do this by gaining and maintaining a deep understanding of your threat environment, security posture and ongoing requirements throughout the service relationship. From this, we can implement additional broad detection policies and craft enterprise-specific risk models to strengthen your defense.

Applied Threat Intelligence. We integrate the highest-quality threat intelligence feeds that are dynamically updated in real time with the best actionable threat data available. CleanINTERNET can block all known malicious threats such as malware, spyware, ransomware, URLs, IPs, ITAR, CIDRs, nation states, and other common attack vectors.

Automated Enforcement. This service delivers automated enforcement through a robust security policy made up of millions of complex rules leveraging billions of threat Indicators of Compromise (IOCs), all from high confidence threat intelligence sources. This continuous policy enforcement provides a compelling security policy, investigating every inbound and outbound packet on your network against threat intelligence feeds to either trust, shield, or allow packets.

Live Analyst Support. Live, experienced cyber analyst support will help fine tune your threat intelligence feeds and current security policy, and continually enhance your overall security posture. We are a trusted partner to augment your security team and provide advanced knowledge, skills and expertise. We continually analyze threat and event data, and monitor all suspicious activity in order to optimize the effectiveness of your security posture.

Comprehensive Reporting. Provide executive and analyst level reporting of all key findings regarding threats, suspicious activity and historical enforcement data. You have access to a real-time cloud-based SIEM visualization dashboard of your important threat activity. Personalized operational reports and technical debriefs on a monthly and quarterly basis provides strategic visibility on your threat landscape, network performance and overall security posture.
